Product Manager

Aberdeen, Scotland, UK · Raphaelsolanke12@gmail.com · linkedin.com/in/kehindesolanke

PROFESSIONAL PROFILE

User centred Product Manager with experience across financial services, AI, e commerce, InsurTech and social impact products, supported by a strong background in complex complaints and root cause analysis within regulated environments. I specialise in getting close to user problems, separating symptoms from underlying causes, and translating evidence into clear product priorities, testable solutions and measurable improvements. My experience spans product discovery, user research, behavioural analytics, product strategy, prioritisation, requirements, UAT and cross functional delivery.

CORE PRODUCT CAPABILITIES

Discovery & User Insight: User interviews · Surveys · Usability testing · Root cause analysis · Journey analysis · Personas · Competitor research · Problem framing

Strategy & Prioritisation: Roadmaps · Backlog management · RICE · MoSCoW · Impact vs Effort · Product trade offs · MVP definition

Delivery: PRDs · User stories · Acceptance criteria · Requirements · Cross functional delivery · UAT · Iterative delivery

Analytics: Mixpanel · Google Analytics 4 · Heatmaps · Funnel analysis · Conversion optimisation · Success metrics

Stakeholders: Founders · Design · Engineering · Operations · Compliance · Legal · External partners · Senior leadership

PRODUCT EXPERIENCE

Product Manager | Art Change Lives

2026 - Present · E commerce art marketplace and social impact platform

- Helped shape product priorities across artist onboarding, collector conversion, marketplace experience, checkout and analytics, balancing artist supply, collector trust, business sustainability and social impact.
- Combined Mixpanel, Google Analytics 4, heatmaps, surveys, usability testing and approximately 15 stakeholder conversations to identify onboarding friction, trust barriers and the gap between artist visibility and genuine collector demand.
- Identified artist onboarding as a major conversion problem and worked with Design and Engineering to simplify the journey, increasing completion from approximately **60% to 84%**, a **24 percentage point increase**.
- Translated evidence into PRDs, user stories, acceptance criteria and prioritised requirements, supporting usability testing and UAT across onboarding, homepage messaging, artist profiles and the buying journey.
- Recommended strengthening the primary marketplace before committing engineering capacity to more complex resale and investment style functionality, using evidence and sequencing to manage limited development capacity.
- Helped define product events and success measures around activation, listing completion, visitor to buyer conversion, purchase completion, repeat purchase and artist retention.

Marketplace snapshot: 500 registered users · 25 active artists · 10+ active causes · 40 completed purchases. These figures provide context on the marketplace rather than being presented as outcomes created by my work alone.

Founder | Finclarity Labs - PolicyNova

Aug 2025 - Present · Product Discovery & Testing · AI powered InsurTech project

- Identified a recurring insurance comprehension problem through conversations with customers, policyholders, friends and family: people often believed they were covered until exclusions or conditions surfaced at the moment of a claim.
- Used UK regulator, academic and industry evidence to test whether the problem was widespread enough to justify deeper discovery, connecting comprehension gaps to rejected claims, duplicate cover and avoidable consumer loss.
- Defined target user segments and wrote user stories with explicit measurable success signals so the prototype could test value rather than rely on assumptions.

- Studied the competitive landscape and precedents including Brolly, Clark and Forgettable, identifying a recurring commercial lesson: policy clarity has user value, but scalable models tend to move closer to insurance distribution.
- Worked through the core regulatory trade off between helpful information and regulated advice, choosing a comparison and interpretation first MVP with no purchase links while trust and comprehension are tested.
- Narrowed the first testable wedge to car insurance and prioritised an MVP around onboarding, policy ingestion, plain English interpretation, market comparison, duplicate detection and grounded policy Q&A.
- Defined six validation measures: trust at decision moments, decision quality, comprehension, repeat usage at high stakes moments, money found through duplicate/gap detection and claim readiness.

Key product learning: The problem is real, but policy interpretation alone may be too episodic to support a scalable business. The next commercial hypothesis would be a broader insurance decision and distribution model, tested only after the core comprehension behaviour is proven.

CUSTOMER & PRODUCT INSIGHTS EXPERIENCE

Product & Customer Experience Complaints Specialist | Utility Warehouse

Jun 2024 - Present · Regulated financial services

- Investigate approximately 80 to 120 complex regulated complaints per month, using root cause analysis to distinguish product, process and service failures from individual customer symptoms.
- Translate recurring complaint themes and journey friction into structured recommendations for Product, Engineering, Compliance, Legal, Quality Assurance, Operations and senior leadership.
- Identified a systemic failure that led to a permanent process improvement, reducing the related complaint category by approximately 75% and removing around 25 avoidable contacts per month.
- Achieved approximately 80% adoption or progression of formally raised improvement actions and successfully defended 30+ Financial Ombudsman Service cases while mitigating at least £15,000 in projected compensation.
- Investigated commission process issues through operational analysis and interviews with approximately 10 to 15 partners; adopted recommendations contributed to 95% partner satisfaction.

EDUCATION & PROFESSIONAL DEVELOPMENT

BSc Business Administration · National Diploma, Marketing · Product Management Certifications in Product Management, Strategy, Analytics, Roadmapping and Agile Product Development

TOOLS & TECHNOLOGY

Mixpanel · Google Analytics 4 · Heatmaps · Stripe & Payment Dashboards · Claude · ChatGPT · Perplexity · Netlify · HTML

PRODUCT PHILOSOPHY

Discover the problem → understand the evidence → identify the root cause → prioritise the highest value opportunity → deliver with the team → measure whether user behaviour changed.
